EMPLOYER SPOTLIGHT

LEO & SONS AUTO REPAIR

Since its establishment in 1975, Leo & Sons Auto Repair has been a pioneer in hybrid and electric vehicle (EV) repair. In June of 2019, their commitment to staying at the forefront of electric automotive technology led them to invest in a Level 2 EV charger with implementation support of Voltrek and financial aide from National Grid.

IMPACT OF EV CHARGER AT WORKSITE

The on-site EV charger has become indispensable for the team at Leo & Sons. It enables technicians to deepen their expertise in EV technology while also serving as a crucial diagnostic tool.

The shop offers its staff free-of-cost access to the EV charger, which has led many technicians to purchase hybrid vehicles for personal use. This initiative has also alleviated range anxiety for new adopters in the area, and saves them hundreds of dollars in fuel costs while promoting a culture of sustainable commuting.

Matt Lamontagne, a technician at the shop, notes that the on-site EV charger has significantly enhanced their ability to service EVs efficiently, enabling the shop to have for-loan EVs on hand for customers with vehicles under repair. Furthermore, the presence of the EV charger has boosted the visibility of the shop online and on various plug-sharing sites, attracting EV owners in close proximity.

With workplace EV charging, Leo & Sons Auto Repair demonstrates its commitment to environmental stewardship and showcases the benefits of embracing EV infrastructure. By doing so, the business enhances both service capabilities and employee satisfaction. This proactive approach fosters a workplace environment conducive to employee wellbeing while simultaneously reducing carbon pollution in the community it serves.

Leo & Sons Auto Repair stands as an exemplary model for businesses aspiring to achieve success and sustainability within the auto repair industry.

Leo & Sons Auto Repair is a Platinum EVAL Certified Organization
